We had been using another excellent math curriculum but found that this one is a bit better as you get into high school. For this reason, I am going to cut over to Saxon at the 7th grade with this book going forward. Results with Saxon for my older children are excellent. The curriculum is rigorous and prepares the student for SATs and university. We use the Art Reed AND the Saxon Dive CDs to help illuminate and give further examples. With Saxon, your student will be well taught. Having said that, if no one in your home is comfortable with math, it would be helpful if you had just one person that you could run a problem or two by if the solutions key doesn't suffice. Otherwise, there is also the Saxon Teacher CDs which are lengthier and may give further instruction. The Art Reed and Dive are usually 8-12 minutes a piece and are sufficient for most student. I love this curriculum and have total confidence that it will prepare my students for any major requiring math, or give them a high school exposure that has the depth and breadth to be the last math that they will have if they

pursue something in the Humanities.

This curriculum has been such a major blessing for us and our son. He was struggling with ACE, which required a lot of help from my wife and I. We finally decided to try something different and went with Saxon. We bought this, along with the matching DIVE CD. Now, he has gotten caught up and is several weeks ahead in a little over 2 months! The lessons have problems that overlap with previous concepts, so that the student sees all the concepts multiple times to truly help them learn the material. My son actually enjoys math now, which is the biggest endorsement of all!

We are homeschoolers and have been using Saxon Math for four years. If you get this book, you will NOT need Algebra 1/2, as this book ends with all of the skill sets needed to go into Algebra 1. We never used the solutions manual, but everything else is necessary to teach and learn.

My son's school uses this book. So helpful for me to have the set with the solutions that break down the steps. I then know how to approach the problems to help my son grasp the concepts needed to solve the math problems.

My daughter struggles with math. We bought the Dive Into Math instructional cd that correlates with this text/edition. Using the two combined, my daughter is understanding and retaining the material! I love how this curriculum reinforces learning by giving review questions from previous chapters in each lesson. The book gives little numbers beside each problem referencing from what chapter each question comes so that if the student can't remember, they know where to look for the answers.

My daughter is not strong in Math and needs additional work over the summer months. I hired a college student to tutor her and the Saxon Math books for them to use. Been working great.

We have used other math books, but this is my child's favorite. We love the fact that it makes them review what was taught (lesson number next to problem) and explaining that she comprehends.

Great set! Easy to use for home schooling!
