Nature's Cancer Fighting Foods

Synopsis

Based on a solid foundation of the healing properties of good nutrition, this book empowers readers with the information they need to make the best choices and to gain control over their total health and well-being - physical, emotional, and spiritual. While addressing the specific needs of those with a diagnosis of cancer, Varona explores the key factors that science and experience have shown to influence the path of prevention and recovery. Grounded in documented research from leading medical institutions - along with studies of the world's healthiest populations - nutrition educator Verne Varona has developed a breakthrough nutritional and lifestyle programme for immunity building and cancer prevention and recovery. This book provides detailed diet and lifestyle modifications that will reinforce the body's immunity and reduce cell-damage to an absolute minimum. While the bulk of this book is devoted to physical nutrition, eating the right foods is not the whole picture. No matter what course of treatment a patient may choose, clinical research and anecdotal testimony have shown that those who have embraced a range of self-healing choices not only see a positive impact on their physical and psychological well-being but inevitably enhance their chances of survival. The most influential of these choices are: life purpose; positive attitude; managing stress; sense of humor; love and social support; emotional expression; and faith. Along with good nutrition, a healthy lifestyle, and physical exercise, these choices contribute to a more comprehensive and complete healing.

This is a good book for anyone fairly new to macrobiotics. While the author is not strictly macrobiotic much within the book conforms to the standards of such a diet. On the downside, like so many other books in this category, there is too much theory accompanied by two few recipes.

I found this is to be a wonderfully informative book. The author has been on a life long quest to unravel the mysteries of the causes of cancer (he lost his mother to cancer when he was a young boy) and the things we do unwittingly to encourage its existence. His goal is to educate. He has reverse engineered a healthy human body and observed what and why that body consumes. The answers are presented in a straight forward manner, with no preaching or scolding. The author is not selling any supplements or health food additives. He presents the information and gives the reader the choices necessary to make changes for the reader's health benefit.

There is some very good information in "Nature's Cancer-Fighting Foods" and yet, the writing is redundant and scattered. I find this book a good reference for looking through and finding things I might need to re-read. There are some good explanations and yet, not thorough enough for text or study. If a person does have cancer - it would depend on what stage they were in - there are some very good food tips for anyone who suffers from illness and yet, if a person was in the final stages of cancer it may not be of help. Thank you.

Great information and recipes. Great foods to help with the after effects of kemo. Also good information if you don't have cancer, on how to eat right and not get cancer. Would recommend to everyone.

...as she went on a holistic regimen. She has read the entire book and is using its tips. It was approved by her Naturalist.
